Description:

A syntax analyzer that reads a file named "input_file.txt" and outputs the content of stack implementations for each string input into a file named "output_file.txt".

Setup:

1. Make sure you have Python 3.x installed
2. Place the source code in a file named "input_file.txt" in the same directory at the Syntax Analyzer program.

Running the Program:

1. Run the syntax analyzer by executing the command: python main.py
2. Check the "output" file for the content of stack implementations for each string input.
